

Endangered species in the UK - birds

Can you tell a sparrow from a finch? Why is it important to recognise birds and care for them? Conserving biodiversity is about genetic variety, habitats and ecosystems. If one species of birds decline it often tells a story about the health of the birds' habitat.

What you can do

You can build your own nest boxes (www.bcc.co.uk/nature) and provide water and food for birds throughout the year. Keep the feeders safe from cats, and you certainly don't want to invite rodents to your bird food. The kind of food is important too.

done this

What schools can do

Besides putting up nest boxes around the school's premises, schools could participate with the *Big School's Birdwatch*. www.rspb.org.uk

Endangered species in the UK – Birds

Peregrine

These magnificent agile falcons have been much persecuted in a variety of ways through the centuries. Yet they survive and have adapted to urban living. They nest in church towers, pylons, warehouses and high-rise flats.

[seen this](#)

Red Kite

This beautiful bird of prey, recognisable by its distinct triangular shaped tail has been persecuted to the brink of extinction. In recent years the population is slowly recovering. Maybe we shall see it hunting the streets of London again. For now, the best chance to see a Red Kite is in Wales.

[seen this](#)

House Sparrow

The dramatic 30-year decline of house sparrows in towns and cities - by 68% - is probably caused by the popularity of ornamental plants such as leylandii, the removal of trees, and the conversion of front gardens for parking. The loss of woody shrubs and trees leaves too few insects in summer for the birds to feed their chicks.

Starling

Flocks of starling are a spectacular sight as the birds seem to dance through the sky as one living organism. Sadly, the number of starlings has more than halved since 1979. Starlings live in small loose groups in the summer and during the winter months they assemble into communal night-time roosts, which can number several thousand birds.
