

## Spring watch

### Is Mother Nature confused or is this a sign of global warming?

Trees have been coming into leaf sooner. Migrant birds are arriving earlier with swallows now a week ahead of their dates in 1970. Frogspawn is being spotted before Christmas in the south-west, while comma and holly blue butterflies have been sighted as early as March.

### Signs of Spring

Late January: **snowdrops**

Late February: **primroses**

Early March: **bumblebees and frogspawn**

Late April: **first swallows arrive**

### What you can do

Help with the Woodland Trust on-line survey or join as a volunteer.

**Bumble Bee**

The Bumble Bee is much bigger than a bee or a wasp and is furry. There are six major different species in the UK.

**Frogspawn**

The difference between frogspawn and toad spawn is that the frog eggs are laid in clumps and the toad eggs are laid in clumps.

**Swallow Family**

**Swift** – Dark all over, pale throats, narrow wings. Look for groups of birds swooping and shrieking between buildings at dusk.

**House Martin** – Shorter tail forks, white rump. They build their mud nests under the eaves of houses.
